

Risk Control Software Systems

Manage More with Less Effort

Today's environment demands that we do more with less. Computers and the software that they run have streamlined many of the functions that we perform on a daily basis. Unfortunately, many software programmers try to solve the risk control problems by proxy. Our risk control software bridges that gap.

Steve Wilmes has worked in the risk control industry for 20 years - facing the same challenges you do on a daily basis. This unique perspective has helped Steve create many software systems to streamline daily functions - from ergonomic databases, HR information systems, workers compensation management systems, project databases, and many more.

ErgoSelfie.com - Ergonomic Self Evaluations

The [Ergo Selfie](#) is designed to evaluate you and your workstation so you can experience ergonomic bliss while typing away at work or just hanging around on your home computer.

Integrated Pest Management

Schools face huge problems in distributing information to parents and the community. One such required piece of public information is the integrated pest management program. We have created a unique software program to take the hassle out of notify parents and the community. Learn more at [IPM Notification Systems](#)

Custom Risk Control Software Systems

Sometimes you have a need that is so specific, you need a custom application. As we mentioned above, Steve has created systems to manage many risk control, safety, work comp, and hr systems. When it comes to Risk Control - We can build just about any system you need to help you manage your organization.

Pearl

The personality test system that is designed specifically to determine if someone fits into the safety culture of your organization.
